ABSTRACT

Nurses' Knowledge in Conducting Cardiac Pulmonary Resuscitation (CPR) at Sakinah Islamic Hospital, Mojokerto Regency

Mirna Dian Kumalasari

Nurses who work in hospitals should know how to do cardiac pulmonary rescucitation. But in fact, there are still many nurses who do not understand about cardiac pulmonary rescucitation. The purpose of this study was to determine the knowledge of nurses in conducting Cardiac Pulmonary Rescucitation (CPR) in Sakinah Islamic Hospital Mojokerto Regency. This study used descriptive design. The populations in this study were all nurses at Sakinah Islamic Hospital in Mojokerto Regency except IGD, ICU / ICCU, OK there were 100 people. The sampling technique of this research was total sampling. The samples in this study were all nurses at Sakinah Islamic Hospital in Mojokerto Regency except IGD, ICU / ICCU, OK there were 100 people. The research instrument used questionnaire that has been tested for validity and reliability. The results of this study suggested that the respondents who had good knowledge as many as 13%, sufficient knowledge as many as 48%, and lack of knowledge as many as 39%. Descriptive analysis suggested that the knowledge of nurses in conducting Cardiac Pulmonary Rescucitation at Sakinah Islamic Hospital in Mojokerto Regency was almost half that is sufficient. This was because all nurses in their education had been provided with emergency training, but because the nurses worked not in rooms that often handle cases of respiratory arrest or cardiac arrest so that knowledge of Lung Heart Resuscitation was never sharpened again which causes some parts of the Lung Heart Resuscitation material were forgotten so they could not answer all the questions correctly

Keywords: knowledge, nurses, cardiac pulmonary rescucitation

ABSTRAK

Pengetahuan Perawat dalam Melakukan Resusitasi Jantung Paru di RSI Sakinah Kabupaten Mojokerto

Mirna Dian Kumalasari

Perawat yang bekerja di rumah sakit seharusnya mengetahui cara melakukan resusitasi jantung paru. Namun kenyataannya, masih banyak perawat yang kurang memahami tentang resusitasi jantung paru. Tujuan penelitian ini adalah mengetahui pengetahuan perawat dalam melakukan Resusitasi Jantung Paru di RSI Sakinah Kabupaten Mojokerto. Penelitian ini menggunakan desain deskriptif. Populasi dalam penelitian ini adalah seluruh perawat di RSI Sakinah Kabupaten Mojokerto selain IGD, ICU/ICCU, OK sejumlah 100 orang. Teknik sampling penelitian ini adalah *total sampling*. Sampel dalam penelitian ini adalah seluruh perawat di RSI Sakinah Kabupaten Mojokerto selain IGD, ICU/ICCU, OK sejumlah 100 orang. Instrumen penelitian menggunakan kuesioner. Hasil penelitian ini menunjukkan bahwa responden yang mempunyai pengetahuan baik sebanyak 13%, pengetahuan cukup sebanyak 48%, dan pengetahuan kurang sebanyak 39%. Analisa data menunjukkan bahwa pengetahuan perawat dalam melakukan Resusitasi Jantung Paru di RSI Sakinah Kabupaten Mojokerto hampir setengahnya adalah cukup. Hal ini karena semua perawat dalam masa pendidikannya telah dibekali dengan pelatihan kegawatan, namun karena tempat perawat bekerja tidak pada ruangan yang sering menangani kasus henti nafas atau henti jantung sehingga pengetahuan tentang Resusitasi Jantung Paru tidak pernah diasah kembali yang menyebabkan beberapa bagian dari materi Resusitasi Jantung Paru terlupakan sehingga tidak dapat menjawab semua pertanyaan dengan tepat.

Kata Kunci: pengetahuan, perawat, resusitasi jantung paru
