

## ABSTRAK

### **Gambaran dukungan suami dalam pemeriksaan ANC pada ibu hamil trimester III di Klinik Akbar Medika Kabupaten Mojokerto**

**HENI SAPURY**

Dukungan suami sangat penting bagi ibu hamil, karena dukungan suami tersebut akan membuat ibu hamil termotivasi dan bersemangat menjalani kehamilannya, sehingga ibu hamil akan patuh dalam melakukan pemeriksaan ANC untuk menjaga kesehatan ibu dan janin yang dikandungnya. Tujuan dari penelitian ini adalah untuk mengetahui gambaran dukungan suami dalam pemeriksaan ANC pada ibu hamil trimester III. Desain penelitian ini adalah deskriptif. Populasi penelitian adalah semua ibu hamil trimester III di Klinik Akbar Medika sebanyak 25 orang. Teknik sampling menggunakan total sampling dan jumlah sampel adalah 25 orang. Hasil penelitian menunjukkan bahwa sebagian besar mendapatkan dukungan negatif dari suaminya yaitu 14 responden (56%), sedangkan yang mendapatkan dukunga positif yaitu 11 responden (44%). Hal ini menunjukkan bahwa dukungan suami secara umum sebagian besar negatif. Dukungan negatif dalam penelitian ini adalah suami kurang meluangkan waktu untuk istri, dan kurang berperan aktif dalam pengobatan dan perawatan istri selama kehamilan.

## **ABSTRACT**

### **Description of husband's support in ANC examination in third trimester pregnant women at Akbar Medika Clinic, Mojokerto Regency**

**HENI SAPURY**

Husband's support is very important for pregnant women, because the husband's support will make pregnant women motivated and excited about their pregnancy, so that pregnant women will obey in conducting ANC checks to maintain the health of the mother and the fetus she contains. The purpose of this study was to determine the description of husband's support in ANC examination in third trimester pregnant women. The design of this research is descriptive. The study population was all pregnant women in the third trimester at the Akbar Medika Clinic as many as 25 people. The sampling technique used total sampling and the number of samples was 25 people. The results showed that most of them received negative support from their husbands, namely 14 respondents (56%), while those who received positive support were 11 respondents (44%). This shows that husband's support in general is mostly negative. The negative support in this study is that the husband does not take time for his wife, and plays an active role in the treatment and care of his wife during pregnancy.
