Judul : Kepatuhan Perawat Dalam Melaksanakan *Surgical Safety Checklist* Dalam Fase *Sign Out* di Kamar Operasi IGD RSPAL Dr. Ramelan Surabaya
Pembimbing : Duwi Basuki, M.Kep

Tindakan pembedahan merupakan salah satu tindakan medis yang bertujuan untuk menyelamatkan nyawa, mencegah kecacatan dan komplikasi. Namun demikian, pembedahan yang dilakukan juga dapat menimbulkan komplikasi yang dapat membahayakan keselamatan pasien sehingga perlu dibuatkan daftar pemeriksaan keselamatan pasien yaitu SSC. Namun kenyataannya, masalah kurangnya kepatuhan penggunaan SSC dalam praktik sehari-hari masih cukup tinggi. Tujuan penelitian ini adalah untuk mengetahui kepatuhan perawat dalam melaksanakan *surgical safety checklist* dalam fase *sign out* di Kamar Operasi IGD RSPAL Dr. Ramelan Surabaya. Desain penelitian ini adalah deskriptif. Populasi dalam penelitian ini adalah seluruh perawat di Kamar Operasi IGD RSPAL Dr. Ramelan Surabaya sebanyak 8 orang. Instrument yang digunakan adalah *Surgical Safety Checklist*. Analisa data menggunakan analisa deskriptif berupa distribusi frekuensi dan persentase. Hasil penelitian menunjukkan bahwa seluruh responden tidak patuh dalam melaksanakan *Surgical Safety Checklist fase sign out* yaitu 8 orang (100%). Perawat yang telah melakukan pelatihan kamar operasi sebanyak 75%. Meskipun perawat telah diberikan pelatihan kamar operasi, akan tetapi *fase sign out* belum dipatuhi sesuai dengan SOP. Perawat hanya melakukan *fase sign out* saat operasi laparotomi

Kata Kunci: kepatuhan, *surgical safety checklist*, perawat

Tittle : The Compliance Of Nurses In Carrying Out The Surgical Safety Checklist In The Sign Out Phase In The IGD Operation Room, Dr. Ramelan Surabaya

Advisor : Duwi Basuki, M.Kep

Surgery is a medical procedure that aims to save lives, prevent disability and complications. However, the surgery performed can also cause complications that can endanger patient safety, so it is necessary to make a list of patient safety checks, namely SSC. But in reality, the problem of lack of adherence to the use of SSC in daily practice is still quite high. The purpose of this study was to determine the compliance of nurses in carrying out the surgical safety checklist in the sign out phase in the IGD Operation Room, Dr. Ramelan Surabaya. The research design is descriptive. The population in this study were all nurses in the IGD Operation Room at RSAL Dr. Ramelan Surabaya as many as 8 people. The instrument used is the Surgical Safety Checklist. Data analysis used descriptive analysis in the form of frequency and percentage distributions. The results showed that all respondents did not comply in carrying out the Surgical Safety Checklist in the sign out phase, namely 8 people (100%). Nurses who have conducted operating room training are 75%. Even though nurses have been given operating room training, the sign out phase has not been complied with according to the SOP. The nurse only does the sign out phase during the laparotomy operation

Keywords: compliance, surgical safety checklist, nurse
