ABSTRACT

NURSING CARE WITH HEARING HALUMINATION SENSORY PERCEPTION DISORDERS IN SCHIZOPHRENIC PATIENTS: AT AL HIDAYAH HALFWAY HOUSE, KUTOREJO MOJOKERTO

BY: DWI NUR LAILI

Schizophrenia is a disease that affect the brain and causes disturbed thoughts, perceptions, emotions, movement, behavior. *Schizophrenia* can be experienced from a young age and is more risky when it appears in the elderly because it involves changes in physical, psychological and socio-cultural terms. The main nursing problem in schizophrenic patients is impaired sensory perception of auditory hallucinations. The purpose of this nursing care is to be able to provide nursing care on the problem of sensory perception disorders of auditory hallucinations at the Al Hidayah Halfway House, Mojokerto. The method used in carrying out nursing care is a case report. Participants who were given nursing care were Participants in this study consisting of 2 patients Sensory perception: Auditory hallucinations. By using interview and documentation study techniques. The results of the study showed that participant 1 was often alone and talked to himself and the patient often listened to the whispers of his brother who wanted to be with him. Participant 2 is often aloof, often daydreaming and the patient often listens to the sound of his mother's whispers telling him to look at his hands as if his mother was there, and often hears the sounds of blood flowing from his ears. The results showed that after the implementation, the two participants showed that the patient was able to control hallucinations, including exercises to rebuke his hallucinatory voices and obey taking medication regularly.
