

ABSTRACT

APPLICATION OF 6 CORRECT PRINCIPLES IN DRUG ADMINISTRATION

BY : ROUDZATUL FUAIDAH

Medication error (*medication error*) is still one of the trends in patient safety issues. In the administration of drugs, nurses are influenced by several factors including knowledge and attitude. Nursing services are an integral part of health services, nurses have a very large role in determining the quality of services and the image of the hospital, because 90% of hospital health services are provided by nurses. In other words, nurses must have high knowledge. Knowing the relationship between education and age with by applying the 6 correct principles of drug administration at Dr. Wahidin Sudiro Husodo Hospital Mojokerto. The research design used was Descriptive. The population of 70 people was taken using the *proportionate stratified random sampling* technique of 60 respondents. Data collection used an observation sheet and then analyzed by editing, coding, scoring and tabulating and presented using the frequency distribution table. The result obtained nurses in doing 6 principles correctly in the administration of drugs, true medicine as many as 50 respondents, true client as many as 50 respondents, true dose as much as 50 respondents, true time as many as 59 respondents, correct method as many as 58 respondents, and true documentation as many as 49 respondents. It is expected that nurses are able to carry out drug administration in accordance with the application of SOP for drug administration based on 6 principles correctly and correctly.

Keywords : Application of 6 correct principles of drug administration

ABSTRAK

PENERAPAN 6 PRINSIP BENAR DALAM PEMBERIAN OBAT

Oleh : ROUDZATUL FUAIDAH

Kesalahan pemberian obat (*medication error*) masih menjadi salah satu trend isu keselamatan pasien. Dalam pemberian obat yang dilakukan perawat dipengaruhi beberapa faktor diantaranya pengetahuan dan sikap. Pelayanan keperawatan merupakan bagian integral dari pelayanan kesehatan, perawat memiliki peran yang sangat besar dalam menentukan kualitas pelayanan dan citra rumah sakit, karena 90% pelayanan kesehatan rumah sakit diberikan oleh perawat. Dengan kata lain, perawat harus mempunyai pengetahuan yang tinggi. Tujuan penelitian ini untuk mengetahui Penerapan 6 prinsip benar dalam pemberian obat di RSUD Dr. Wahidin Sudiro Husodo Mojokerto. Desain penelitian yang digunakan adalah Deskriptif. Populasi sebanyak 70 orang diambil dengan menggunakan teknik *Proportionate Stratified Random Sampling* sebanyak 60 responden. Pengumpulan data menggunakan lembar observasi kemudian dianalisa secara editing, coding, scoring dan tabulating serta disajikan dengan menggunakan tabel distribusi frekuensi. Hasil penelitian didapatkan perawat dalam melakukan 6 prinsip benar dalam pemberian obat, benar obat sebanyak 50 responden, benar klien sebanyak 50 responden, benar dosis sebanyak 50 responden, benar waktu sebanyak 59 reponden, benar cara sebanyak 58 responden, dan benardokumentasi sebanyak 49 responden. Diharapkan perawat mampu melaksanakan pemberian obat sesuai dengan penerapan SOP pemberian obat berdasarkan 6 prinsip benar dengan baik dan tepat.
