

SUMMARY

MIDWIFERY CARE FOR Mrs. "N" 28 YEARSOLD AT TLOGOSADANG COMMUNITY HEALTH CENTER, LAMONGAN

By : Marisa Putri Insani

Continuing care, which aims to provide comprehensive and continuous care to pregnant women through the contraceptive period, is the cornerstone of midwifery practice. The relationship between midwife and patient is strengthened, trust is fostered, and early detection of maternal and newborn problems is encouraged. This care encourages early detection of maternal and newborn problems, strengthens the bond between midwife and patient, and fosters trust. This report states that Mrs. N, 28 years old, received care at the Tlogosadang Lamongan Community Health Center. The services received included pregnancy, childbirth, postpartum care, newborn care, and family planning. The documentation period began between November 18, 2025, and January 8, 2026, using the SOAP method. The author conducted ten visits: one for pregnancy, one for labor, four for the postpartum period (KF I–IV), three for newborns (KN I–III), and one for family planning. The mother's condition was good during the pregnancy visit and although there were complaints of cramps in the hands, this is normal. The TPMB midwife performed the delivery procedure according to Normal Delivery Care (APN) and then followed up with the Early Initiation of Pregnancy (IMD) after the baby was born. There were no issues during the postpartum visits, including the newborn. This was her second child, so she already had experience with postpartum and newborn care. The mother chose the contraceptive implant after receiving an explanation of several contraceptive methods during her fourth postpartum visit. Pregnancy, delivery, postpartum, newborn care, and family planning were carried out according to established theory.

Keywords : pregnant, giving birth, postpartum, neonate, family planning

RINGKASAN

ASUHAN KEBIDANAN PADA NY. “N” USIA 28 TAHUN DI PUSKESMAS TLOGOSADANG KABUPATEN LAMONGAN

Oleh : Marisa Putri Insani

Perawatan berkelanjutan, yang bertujuan untuk memberikan perawatan komprehensif dan berkelanjutan kepada wanita hamil hingga periode kontrasepsi, adalah landasan praktik kebidanan. Hubungan antara bidan dan pasien diperkuat, kepercayaan dipupuk, dan deteksi dini masalah ibu dan bayi baru lahir didorong. Asuhan ini mendorong deteksi dini masalah ibu dan bayi baru lahir, memperkuat ikatan antara bidan dan pasien, serta menumbuhkan kepercayaan. Laporan ini menyatakan Ibu N, 28 tahun, mendapatkan perawatan di Puskesmas Tlogosadang Lamongan. Adapun pelayanan yang diperoleh yakni dari kehamilan, persalinan, nifas, perawatan bayi baru lahir, dan keluarga berencana. Waktu dokumentasi dimulai antara tanggal 18 November 2025 hingga 08 Januari 2026 menggunakan metode SOAP. Penulis melakukan sepuluh kunjungan: satu untuk kehamilan, satu untuk persalinan, empat untuk masa nifas (KF I–IV), tiga untuk BBL (KN I–III), dan satu untuk keluarga berencana. Dalam pemberian pelayanan berkelanjutan ini tidak ditemukan kesenjangan antara teori dan fakta. Dengan adanya pemantauan menyeluruh ini, asuhan memberikan manfaat bagi penulis sebagai pengalaman praktik lapangan, bagi klien sebagai penerima layanan yang berkualitas, serta bagi institusi dan pihak lain sebagai dokumen ilmiah yang bermanfaat.
